(54) ORIGINAL TEXT GENERATION PROCESSOR AND MEDIUM FOR STORING PROGRAM FOR THE SAME

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain a device for managing data by specifying a data group with plural dimensions using a parameter setting chart by describing each kind of parameter used in a rhombus in the parameter setting chart having the plural dimensional coordinates.

SOLUTION: At the time of operating adhesion by using a rhombus 2 for adhering characters or pictures so that they can be displaced by using a displacement detection key, a parameter used in each pertinent rhombus 2 is set by using a parameter setting chart 1 having the plural dimensional coordinates. Thus, the content of the pertinent parameter is used from the point of view of the plural coordinates. Also, the displacement detection key itself is allowed to have a meaning for facilitating a countermeasure to a specific processing and a meaning for facilitating a countermeasure to plural specific processing by adding a tag or an extender. Thus, further complicate processing such as not only simple displacement but also displacement to be operated after the check of a condition is attained.
